

KATALOG DER TYPEN VON FORMICIDAE (HYMENOPTERA) DER SAMM-
LUNG DES NATURHISTORISCHEN MUSEUMS BASEL (2. Teil)

C. Baroni Urbani

Subfam. Dorylinae, Leptanilinae, Dolichoderinae und Pseudomyrmecinae

Es wird hier der 2. Teil des Katalogs vorgelegt. Der 1. Teil erschien in der gleichen Zeitschrift (Mitt. Ent. Ges. Basel N.F. 1973, 23: 122-152). Die nomenklatorischen Kriterien und die Abkürzungen sind die gleichen wie sie im 1. Teil verwendet wurden und es wird auf die entsprechenden Erklärungen verwiesen.

Ich möchte nur hervorheben, dass die Namen der Fundorte von den Original-etiketten der Typen genauestens abgeschrieben wurden, auch wenn dieser vom Fundort der Originalbeschreibung mehr oder weniger abweicht. Nur in wenigen Fällen habe ich die Abkürzung "leg." nach dem Namen des Sammlers beigefügt, in den Fällen, wo sie auf der Etikette fehlte, oder wo dieser Name zu Verwechslungen mit der Lokalität hätte führen können.
